The Lab instruments

Looking forward

What is The Lab?

The Lab is a global initiative that supports the identification and piloting of cutting edge climate finance instruments. It aims to drive billions of dollars of private investment into climate change mitigation and adaptation in developing countries.

Objectives and outcomes

- **Identify, stress test, and refine** the design of innovative financial instruments targeting developing countries
- **Inform** governments, public finance institutions, and private investors in developed and developing countries **about the potential of Lab instruments to unleash private investment**
- **Demonstrate effective public-private collaborations** between senior actors from developed and developing countries that mobilize private finance at scale
- **Success will be** facilitating effective pilots and their replication backed by real investors, at greater scale and in new contexts

Overarching Lab criteria

- **Actionable**

Instrument must be implementable in a few years without facing major barriers

- **Innovative**

Instrument must address risk, cost, and liquidity gaps with new or enhanced tools

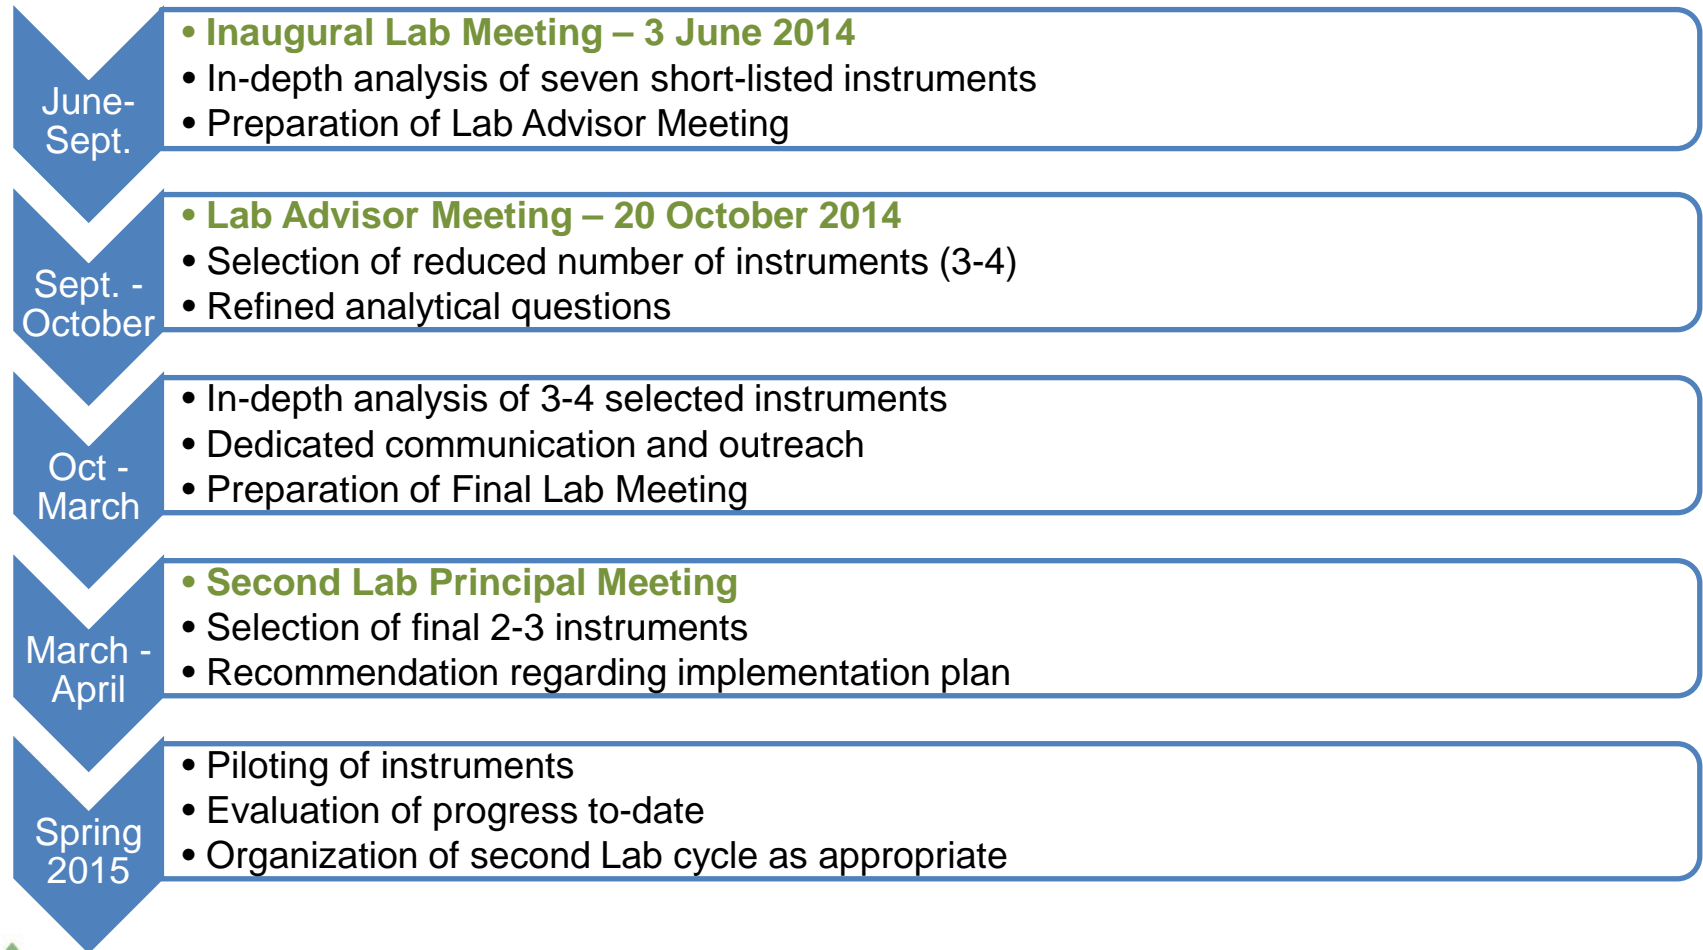

- **Catalytic**

Instrument must engage and mobilize private capital at scale

- **Transformative**

Instrument must have significant impact and be sustainable and replicable

Timeline

Lab instruments

Category	Lab Instrument - Overview
Aggregation platforms	<p>Renewable Energy Platform for Institutional Investors (REPIN) <i>To stimulate renewable energy deal flow and engage institutional investors to increase overall financing at cheaper costs</i></p>
Risk Mitigation	<p>Long-term Currency Swap <i>To lower the cost of financing and increase private finance flows to developing countries by mitigating foreign exchange risk for renewable energy projects</i></p>
	<p>Insurance for Energy Savings <i>To provide assurance that energy efficiency projects will generate financial savings</i></p>
Primary Deal Flow	<p>Climate Development & Finance Facility (CDFF) <i>To fast-track project finance for climate projects</i></p>
	<p>Debt Fund for Prepaid Energy Access <i>To provide off-grid entry-level renewable home power to five million isolated homes in five years</i></p>
	<p>Global Renewable Independent Power Supplier (GRIPS) <i>To bring renewable energy production and storage to off-grid African industries</i></p>
Adaptation and Climate Resilience	<p>Agricultural Supply Chain Adaptation Facility (ASCAF) <i>To improve the Climate Resilience of Agricultural Supply Chains</i></p>

Renewable Energy Platform for Institutional Investors (REPIN)

Problem

Institutional investors struggle to provide much-needed long-term financing to RE project finance as opportunities are too small, illiquid and perceived as high-risk.

The instrument

Platform/umbrella of context-specific financial structures to facilitate transactions between project lenders and institutional investors.

The structures - Debt pass-through, Aggregation, Securitization - will aim to improve investments' credit quality and size in order to match institutional investors' requirements. When needed, the platform would also include credit enhancement.

Proponent

European
Investment Bank

Target Sector

Renewable energy

Geographical Target

Middle income countries
Pilot: South Africa

Private Capital Targeted

Institutional Investors
and commercial banks

Long-term Currency Swap

Problem

Investors in developing countries have limited access to instruments to manage currency risk.

The instrument

A new entity would, according to markets' needs:

- **issue currency swaps** directly absorbing currency and counterparty risk on its balance sheet
- **back the swaps** indirectly by supporting developers through credit enhancement which removes counterparty risk

Proponent

Target Sector

Geographical Target

Private Capital Targeted

World Resource Institute

Renewable energy

Asia, Middle East and Latin America, Sub-Saharan Africa
Pilot: 6 countries

Private equity

Insurance for Energy Savings

Problem

Energy efficiency investment by SMEs is limited and mostly self-financed, due to high perceived risk and lack of information on investment performance.

The instrument

Complete package of measures that enhance investor's confidence and trust in the viability of EE projects:

Local insurers would provide a **new insurance product** that covers the projected value of energy savings

Credit lines from development banks would provide long-term capital to lower financing costs

Proponent

Target Sector

Geographical Target

Private Capital Targeted

Danish Energy Agency

Energy Efficiency

Emerging markets
Pilot: Mexico

SMEs in selected sectors (industry, services, agroindustry)

Climate Development & Finance Facility (CDFF)

Problem

In low and middle income countries, good bankable projects are rare: project development is costly, policies are complex, experience is scarce, finance is constrained and expensive.

The instrument

A new entity managed by FMO that would set up three separate facilities for different phases of the project cycle:

- A donor-funded **Development Facility (DF)** co-develop projects up to 50% of value;
- A **Construction Finance Facility (CFF)**, funded by DFIs and commercial investors, providing up to 75% of capital needed for construction
- A **Refinance platform** of private investors would provide long-term, low-cost debt capital due to lower risks post-construction

Proponent

Target Sector

Geographical Target

Private Capital Targeted

Dutch
Development
Bank (FMO)

Energy; Forestry;
Transport

Low and Lower middle
income countries
Pilot: 10 projects

Private Equity and Institutional
Investors

Debt Fund for Prepaid Energy Access

Problem

600 million people in Sub-Saharan Africa lack access to electricity: Prepaid off-grid solar systems could reduce this number, however access to working capital is limited.

The instrument

A **fund providing working capital** to suppliers of prepaid off-grid renewable energy services, through a **mix of asset finance and consumer debt**.

The fund would raise an initial target of USD 50 million as debt from banks, institutional investors and DFIs. Public financing (loan guarantees or first loss/mezzanine) and credit rating of the consumer pools will reduce associated loan risks.

Proponent	Target Sector	Geographical Target	Private Capital Targeted
Azuri Technologies	Off-grid renewable energy	Low income countries <i>Pilot:</i> Sub-Saharan Africa	Commercial banks and Institutional Investors

Global Renewable Independent Power Supplier (GRIPS)

Problem

A significant portion of industrial activity in Sub-Saharan Africa relies on off-grid electricity produced by expensive and unreliable diesel generators.

The instrument

A **new private sector entity (“GRIPS”)** would develop, build, and own a diversified pool of decentralized renewable energy assets, based on standardized, low-risk technologies. GRIPS could favor access to electricity for the surrounding communities - e.g. *grid islands*.

The **100% equity-funded portfolio approach** would enable GRIPS to offer more appealing short-term power purchase agreements to reliable and creditworthy industrial off-takers, while spreading single-deal risk across the assets pool

Proponent	Target Sector	Geographical Target	Private Capital Targeted
Deutsche Bank	Off-grid renewable energy	Initially Sub-Saharan Africa <i>Pilot: Nigeria, Kenya and South Africa</i>	Project sponsors, institutional investors, family offices

Agricultural Supply Chain Adaptation Facility (ASCAF)

Problem

In developing countries, small-to-medium producers have difficulty accessing long-term finance and limited knowledge of suitable climate-resilience measures.

The instrument

The **new fund** would target credit risks and capacity gaps to enable companies to extend medium to long-term loans and know-how to their suppliers for investments in measures which could improve crops productivity and ultimately the climate resilience of supply chains.

ASCAF would be a **value chain financing mechanism** that provides, through Multilateral Development Banks, agricultural corporations with donor-backed first loss guarantees and finance for technical assistance

Proponent	Target Sector	Geographical Target	Private Capital Targeted
Calvert Investments & IDB	Agriculture & Forestry	Low & middle-income countries <i>Pilot: Latin America and Caribbean</i>	Agricultural corporations SME producers / processors

Looking forward

- In-depth analytical work has continued on the seven selected instruments, following the inaugural Lab meeting
- A written report summarizing the analytic findings for the seven instruments will be published at the end of November 2014
- The Secretariat will present the preliminary analysis at the Lab Advisor Meeting on 20 October 2014 in Venice. Lab Advisors, in consultation with their Principals, will select the most promising three to four for further in-depth analysis and development.
- Analysis will continue until spring 2015, outlining implementation pathways, and challenges for a potential pilot phase

Thank you!
